

Homework help 2/17/21

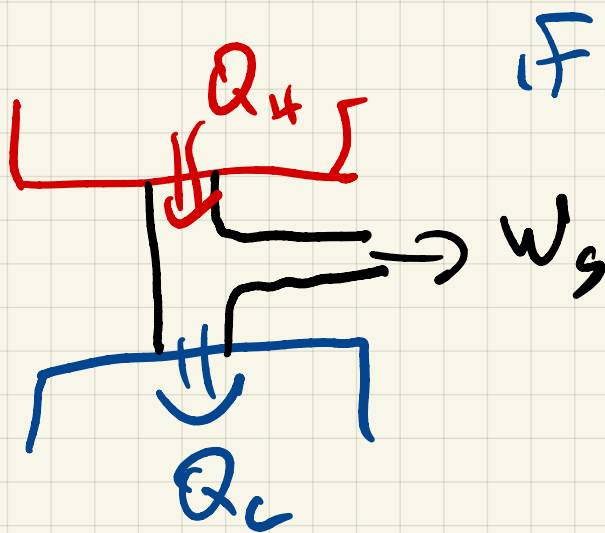

W_s

$$\Delta E_{th} = -W_s + Q$$

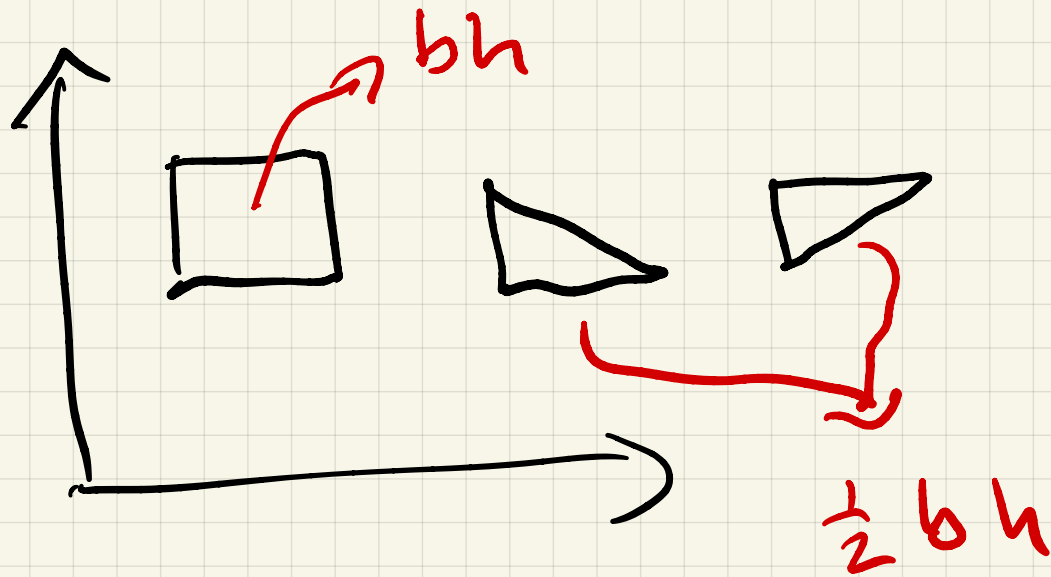

For a cycle

$$Q = W_s$$

$$\text{If } Q_H = 200 \text{ J} \quad \& \quad Q_C = 140 \text{ J}$$

$$Q_H - Q_C = W_s$$

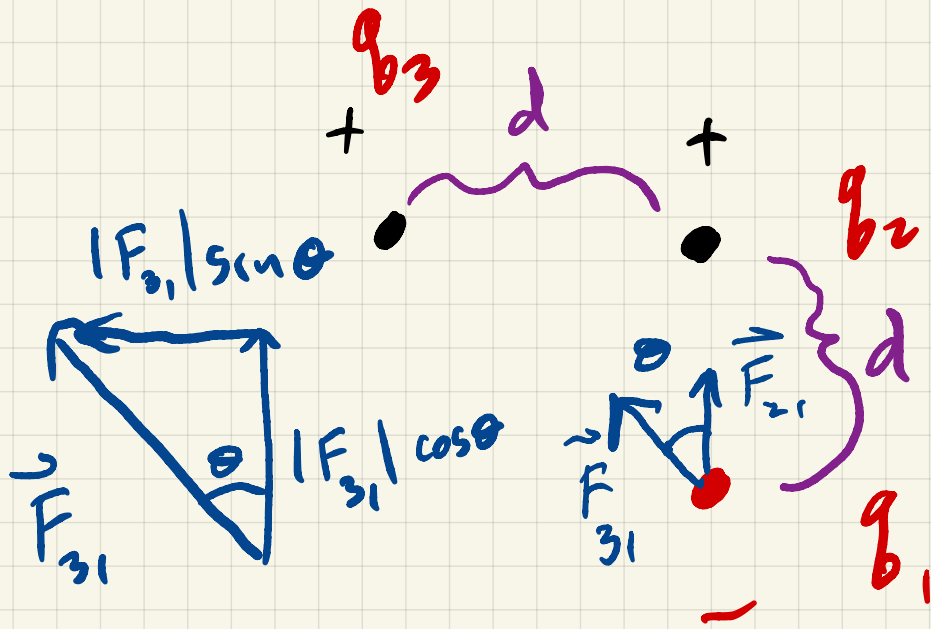

ΔE_{th} w Q

$$\vec{F}_E = \frac{k |q_1 q_2|}{r_{12}^2} \hat{r}_{12}$$

$$\Rightarrow \vec{E} = \frac{\vec{F}}{q} \Rightarrow \vec{F} = E \vec{q}$$

$$qE = mg$$

$$\vec{F}_{21} = |F_{21}| \hat{y}$$

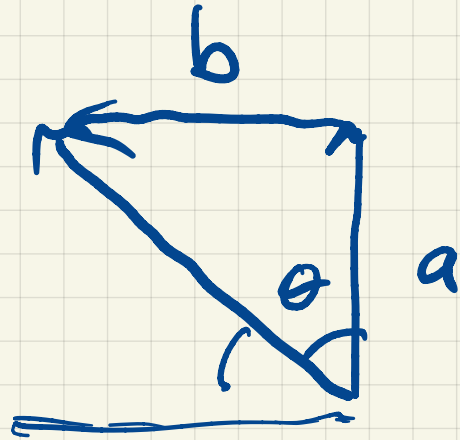

$$\vec{F}_{31} = |F_{31}| \sin \theta \hat{x} + |F_{31}| \cos \theta \hat{y}$$

$$|F_{21}| = \frac{k |q_2| |q_1|}{d^2}$$

$$\theta_{31} = \tan^{-1} \frac{d}{d} = 45^\circ$$

$$|F_{31}| = \frac{k |q_3| |q_1|}{(d^2 + d^2)^{1/2}}$$

$$\vec{F}_{\text{net}} = \vec{F}_{21} + \vec{F}_{31} = |F_{31}| \sin \theta \hat{x} + (|F_{21}| + |F_{31}| \cos \theta) \hat{y}$$

$$\tan \theta = \frac{b}{a}$$

$$\theta = \tan^{-1}\left(\frac{b}{a}\right)$$
